***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-6, Group I, are drawn to semiconductor device, classified in class 257, subclass 301.
  - II. Claims 7-17, Group II, are drawn to method of making, classified in class 438, subclass 386.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the semiconductor device can be made by forming a trench in a substrate; depositing a layer of doped glass in the trench; annealing the substrate to diffuse the dopant from the doped glass into the bottom and sidewalls of the trench; removing the doped glass; depositing a conformal dielectric layer lining the trench; exposing the bottom of the trench using RIE to remove the dielectric layer formed at the bottom of the trench; conformally depositing a conductive layer in the trench; removing an upper portion of the conductive layer in the trench; forming a dielectric layer covering the surface of the conductive layer; forming a second conductive layer over dielectric layer and filling in the trench.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2814

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
